

## International Symposium on Sensors and Biosensors (ISSB-2018)

From on-site medical diagnostics to self-driving cars, the exciting advances in today's technology require sensors and actuators. However, development of reliable and economical sensor demands extensive networking and interaction between industrialists, scientists, and researchers from various disciplines including chemistry, biology, physics, medicine and engineering. To promote this interaction, "International Symposium on Sensors and Biosensors (ISSB 2018)" was successfully organized by Sensors and Biosensors (SBS) group of Interdisciplinary Research Centre in Biomedical Materials (IRCBM) at COMSATS University Islamabad (CUI), Lahore Campus. ISSB 2018 was majorly sponsored by Higher Education Commission (HEC) of Pakistan and French Hubert Curien Partnership under PERIDOT Research Program along with some industrial partners. ISSB 2018 aimed to bring together academics and researchers from within and outside of Pakistan not only to discuss latest progress and development in field of Sensors and Biosensors but also promote interaction between them and perhaps support in developing new mutually beneficial collaborations as well. Three International and ten National speakers participated and highlighted the latest key development in the field of Sensors and Biosensors. Additionally, Prof. Marty from University of Perpignan, France discussed about the latest development and applications of biosensors in medicinal diagnosis.

Director CUI, Lahore Campus, Prof. Qaisar Abbas had a successful meeting with the delegates and discussed the ways for the further strengthening of collaborations with SBS and CUI.

Here, are some of the highlights of the ISSB 2018.
